2.33(b)(3) Critical

Attending veterinarian and adequate veterinary care.

On June 23, 2020 a 9-month old canine was found dead two days following a surgical procedure to place a tracheostomy tube. The necropsy findings reported a large mucous plug was found below the tracheostomy tube, which occluded the airway and caused asphyxiation. Daily observations of the animal from the evening of June 21, 2020 show that mucous was detected by a member of the research team and not reported to the attending veterinarian. This identification of abnormal findings constitutes a problem of animal health that must be communicated to the Attending Veterinarian. The registrant must develop and implement a plan for effective communication of abnormal findings to the attending veterinarian.

Correct by 12/15/2021

This inspection and exit interview were conducted with the facility representatives.
