

## Inspection Report

Single Vision Inc  
8185 Forest Hills Rd  
Melrose, FL 32666

Customer ID: **331487**  
Certificate: **58-C-1117**  
Site: 001  
SINGLE VISION INC

Type: FOCUSED INSPECTION  
Date: 27-JUL-2017

### 2.40(a)(1) REPEAT

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

On the previous two inspections (which had occurred 5 months apart from each other), the Program of Veterinary Care that was reviewed did not address the: fennic fox, porcupines, servals, geoffrey cats, lynx, lemurs, bush baby raccoon, fox & squirrels. This is still the case today.

The Program of Veterinary Care was still at the veterinarian for completion and has not yet been completed, therefore it was not available for review to determine compliance if these species veterinary care have been adequately addressed. This program of veterinary care has been at the veterinarian for (at least) 6 months now.

This Program of Veterinary Care shall be completed in a timely manner so that it can be reviewed to determine if all of the mammals are receiving the necessary care prescribed by your veterinarian.

### 2.125

#### INFORMATION AS TO BUSINESS; FURNISHING OF SAME BY DEALERS, EXHIBITORS, OPERATORS OF AUCTION SALES, INTERMEDIATE HANDLERS, AND CARRIERS.

The licensee does not have any acquisition record for the one newly acquired lynx, and states that this record is in his truck which is not at the facility.

These types of documents/information shall be readily available for review during the inspection.

Correct by August 1, 2017

### 3.81(a) REPEAT

#### ENVIRONMENT ENHANCEMENT TO PROMOTE PSYCHOLOGICAL WELL-BEING.

On the previous two inspections (which had occurred 5 months apart from each other), the bush baby did not have a primate enrichment plan. This is still the case today. The licensee stated that the plan is still being reviewed/developed by the veterinarian, and therefore was not reviewed. This enrichment plan has been at the

---

veterinarian for (at least) 6 months now. Additionally, the licensee acquired 2 juvenile marmosets. This species of primate should also be included in the plan and address the special considerations for juvenile primates.

### 3.125(a) REPEAT

#### FACILITIES, GENERAL.

The licensee has not performed any corrections in the large lion play yard since the last inspection. The enclosure in the large lion play yard continues to be 10 feet high with a kick in, but the kick in portions cited on the last inspection have not been corrected and are still remain unattached from its supports in several locations. They continue to be upright. with no kick in portion in the affected areas and pose a risk of escape The height of this enclosure in these affected areas pose a risk of escape

There has been no corrections in the tiger/lion yard since the last inspection either. In the tiger/lion enclosure the fence is still not straight up and is wobbly & sagging in some areas. The space between each support pole is too far apart to keep this fence in an upright position. Additionally, one of the vertical support posts for the fence has broken off contributing to the pliability of the fence.

The clawed & splintered wood log in the cougar/leopard enclosure has also not been corrected. It continues to be splintered with an exposed metal bolt. The cougar resting shelf also now has an exposed screw head. These splinters, screw head, and bolt pose a risk of injury to these cats as they climb/walk &/or claw this log or surface.

The plywood on the tiger/lion yard shelter structure and the plywood in the back cougar enclosure are also now splintered which can potentially injure these cats.

The plywood resting board in the 3 kinkajou enclosure also has had no corrections and continues to deteriorate. When plywood deteriorates it can become soft and may not be structurally sound to support the weights of the animals, and the resulting splinters can injure these animals as well.

The sand in the large lion play area has now eroded and has exposed the wire mesh . This wire mesh is not flat against the sand and has gaps which can potentially injure the feet &/or legs of the cats.

The housing facilities must be structurally sound and maintained in good repair to protect the animals from injury and contain them.

### 3.129(a) REPEAT

#### FEEDING.

The licensee feeds a mixture of different types of meats and in varying ratios/quantities depending on availability. The big cat diet is not standardized or uniform from day to day. The licensee stated that recently a tiger was

---

diagnosed with a vitamin A deficiency.

The licensee continues to feed this non commercial diet to his cats. There is still no written, veterinarian, approved diet plan. The written diet should specify the type, quantity, and frequency of any nutritional supplements.

Your veterinarian must approve (in writing) a feeding plan for all big cats to ensure that the cats are getting the proper nutritional requirements (both for protein as well as vitamins & minerals) considering age, season, weight and other considerations to prevent metabolic diseases, vitamin deficiencies, as well as other illnesses.

This is a focused inspection limited to the areas that were cited as non compliant on the previous inspection, as well as, the inspection of the red fox and leopard.

This inspection and exit interview were conducted on-site with the licensee.

This inspection report will be mailed by First Class Mail & Certified Mail # 7015 3010 0001 4261 5635
